Patent No. 6554298
GENERAL INFORMATION:
APPLICANT: Taylor, Diane E.
APPLICANT: Ge, Zhongming
                                                                                                                                                                       US-09-092-315-13
; Sequence 13, Application US/09092315
; Patent No. 6399337
```

```
; TITLE OF INVENTION: NUCLEIC ACIDS ENCODING ALPHA-1,3
; TITLE OF INVENTION: FUCOSYLTRANSFERASES AND EXPRESSION SYSTEMS FOR MAKING AND
; TITLE OF INVENTION: EXPRESSING THEM (amended)
; TITLE OF INVENTION: EXPRESSING THEM (amended)
; TITLE OF INVENTION: EXPRESSING THEM (amended)
; TITLE OF INVENTION NUMBER: US/09/733,524A
; CURRENT APPLICATION NUMBER: US 09/092,315
; PRIOR APPLICATION NUMBER: US 09/092,315
; PRIOR PLILING DATE: 1988-06-05
; PRIOR PLILING DATE: 1989-06-06
; PRIOR PLILING DATE: 1997-06-06
; NUMBER OF SEQ ID NOS: 27
; SOFTWARE: PASISEQ for Windows Version 4.0
; SEQ ID NO 1
; LENGTH: 464
; TYPE: PRT
; ORGANISM: Helicobacter pylori
US-09-733-524A-1
```

New isolated fucosyltransferase polynucleotides and polypeptides, useful for synthesizing oligosaccharides, glycoproteins, or glycolipids. Helicobacter pylori fucosyl transferase, FutA, protein, SEQ ID NO: 18. Bezila DJ; Fucosyltransferase; protein production; enzyme Johnson KF, "TTT Location/Qualifiers /note= "Encoded by AEB70147 standard; protein; 440 AA Helicobacter pylori; strain 802 (NEOS-) NEOSE TECHNOLOGIES INC (UYAL-) UNIV ALBERTA. 22-JAN-2004; 2004US-00764212 22-JAN-2004; 2004US-00764212 Simala-Grant J, Taylor D, (first entry) WPI; 2005-521417/53. N-PSDB; AEB70146. Misc-difference US2005164338-A1 06-OCT-2005 28-JUL-2005. AEB70147; 

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproceins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.

Claim 1; SEQ ID NO 18; 97pp; English.

The invention relates a purified transmembrane segment-free alpha 1,3-

tucosyltransferase polypepide, having a repeat of the sequence: X 1-X 2-

Leu-Arg-X.3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Ash, and X 3 is

Leu-Arg-Man. Also included are the nucleic acid encoding the protein

(including its complement or fragment), a vector containing the nucleic

acid, a host cell containing uncleic acid or vector, an antibody which

conditing transmembrane segment-free alphal, 3- fucosyltransferase,

comprising a host cell modified with the nucleic acid or its

producing transmembrane segment-free alphal, 3- fucosyltransferase,

comprising a host cell modified with the nucleic acid or its

comprising the produced oligosaccharides, such as Lex, Ley or Elex, by

contacting the produced oligosaccharides, or by culturing the cell,

contacting the bost cell with a substrate, to produce oligosaccharides

contacting the obtained oligosaccharides. The nucleic acid is useful

as probe for detecting the nucleic acid, by contacting a sample with a

contacting the nucleic acid using polymerase chain reaction (PCR). The

contacting the nucleic acid using polymerase chain reaction (PCR). The

mullifying the nucleic acid using polymerase chain reaction (PCR).

contacting the nucleic acid using polymerase chain reaction (PCR).

contacting the nucleic acid using polymerase chain reaction (PCR).

contacting the nucleic acid using polymerase chain reaction (PCR).

contacting the producing a transmembrane segment-free alphal, 3-

fucosyltransferase-funsion producing a transmembrane segment-free alphal, 3-

conceptle under conditions which allow expression and secretion of the

contacting the producing a lange way probe in a main and a series of the protein in a sample. The antibody is also useful for diagnosing disorders

conditioning disease, and for inhibiting abnormal applal, 3-

cucosyltransferase gene product activity. The nucleic acid using

the protein or cell are useful in the development of assays to detect

Lierniya of Ala. Also included are the nucleic acid encoding the protein (including its complement or fragment), a vector containing the nucleic acid, an entibody which acid, a host cell containing nucleic acid or vector, an antibody which selectively binds to the protein and a gene expression system for producing transmembrane segment-free alphal, 3- fucosyltransferase, comprising a host cell modified with the nucleic acid or its enzymatically active portion. The protein and cells are useful for producing fucosylated oligosaccharides, such as Lex, Ley or slex, by contacting the protein with a substrate, to produce oligosaccharides and purifying the protein with a substrate, to produce oligosaccharides and purifying the obtained oligosaccharides. The nucleic acid is useful as a probe for detecting the nucleic acid, by contacting a sample with a nucleic acid probe that hybridisation of the probe; or by polynucleotide, and detecting hybridisation of the probe; or by only nucleotide, and detecting hybridisation of the probe; or by charmed acid using polymerase chain reaction (PCR). The nucleic acid using polymerase chain reaction (PCR). The chost cell is useful for producing a transmembrane segment-free alphal, 3-fucosyltransferase-fusion protein, by growing the host cell containing a vector operably linked to a polynucleotide encoding a desired polypeptide or peptide under conditions which allow expression and secretion of the fusion protein in a sample. The presence of the protein in the

sample is indicative of infection by Helicobacter pylori or the presence of malignant cells. The antibody is also useful for diagnosing disease and for inhibiting abnormal alphal, 3-fucosyltransferase gene product activity. The nucleic acid is useful as part of ribozyme and/or triple helix sequences and for alphal, 3-fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect mammalian tumours. The present sequence represents an H. pylori alphal, 3 fucosyltransferase encdoed by the fucT gene. (Updated on 29-AUG-2003 to standardise OS field)

This is the amino acid sequence of the novel alpha-1,3-
fucosyltransferase of Helicobacter pylori NCTC 11639, as deduced from the
newly isolated furg gene (see AAV8021). The enzyme is characterised by 8
c-terminal heptad repeats and by the lack of a transmembrane domain. The
absence of a transmembrane domain allows the enzyme to be readily
released from recombinant host cells. The enzyme to be readily
production of fucosylated oligosaccharides such as Lewis X, Lewis Y and
sialyl Lewis X, which are structurally similar to certain tumour
associated antigens found in mammals. These glycoconjugates also have
mammalian tumours. The enzyme can also be used to raise specific
antibodies. Inhibition of abnormal fucr gene product activity can be used
for the treatment of intestinal mucosal disease. (Updated on 17-OCT-2003
to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Enzyme; fucT; alphal,3 fucosyltransferase; oligosaccharide; Lex; Ley; sLex; Helicobacter pylori infection; malignant cell; mammalian tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                New isolated alpha-1-3-fucosyltransferase gene - obtained from
Helicobacter pylori, used to develop products for the diagnosis and
treatment of intestinal mucosal diseases, e.g. tumours.

The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This is the amino acid sequence of a selected interacting domain (SID), identified via protein-protein interactions. Note: Where the patent number printed at the top of the pages in the specification has obscured areas of protein sequence, the indexer has replaced the residue with an X to
                                                                                                                                   complexes of protein-protein interactions in Helicobacter pylori, tul for identifying modulating compounds for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 11.6%; Score 51; DB 5; Length 130

                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of malignant cells. The antibody is also useful for diagnosing disorders and monitoring disease, and for inhibiting abnormal alphai, and monitoring disease, and for inhibiting abnormal alphai, and for inhibiting abnormal alphai, a part of ribozyme and/or triple helix sequences and for alphai, a fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect mammalian tumours. The present sequence represents an H. pylori alphai, fucosyltransferase encoded by the fuct gene. (Updated on 29-AUG-2003 to

Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful for secening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This is the amino acid sequence of a selected interacting domain (SID), identified via protein-protein interactions. Note: Where the patent number printed at the top of the pages in the specification has obscured areas of protein sequence, the indexer has replaced the residue with an X to

Purified transmembrane segment-free alphal, 3-fucosyltransferase polypeptide useful for producing fucosylated oligosaccharides.

Example 3; Fig 6; 37pp; English.

The invention relates a purified transmembrane segment-free alpha 1,3fucosyltransferase polypeptide, having a repeat of the sequence: X 1-X 2fucustylx 3.4. Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is
lea. May 3. A 4. Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is
lea. May 1 or Ala. Also included are the mucleic acid encoding the protein
(including its complement or fragment), a vector containing the nucleic
acid, a host cell containing nucleic acid or vector, an antibody which
acid, a host cell containing nucleic acid or vector, an antibody which
acid, a host cell modified with the nucleic acid or its
comprising a host cell modified with the nucleic acid or its
comprising a host cell modified with the nucleic acid or its
contacting the protein with a substrate such as LacNAc-R and GDP-fucose,
and purifying the produced oligosaccharides, or by culturing the cell,
contacting the host cell with a substrate, to produce oligosaccharides
and purifying the obtained oligosaccharides. The nucleic acid is useful
as a probe for detecting the nucleic acid, by contacting a sample with a

This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes firth and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired

New isolated polynucleotide encoding fucosyltransferase protein, useful for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids.

WPI; 2004-123401/12. N-PSDB; ADJ77819.

Claim 12; SEQ ID NO 12; 72pp; English.

```
nucleic acid probe that hybridises to alphal, 3-fucosyltransferase
polynucleotide, and detecting hybridisation of the probe; or by
amplifying the nucleic acid unaing polymerase chain reaction (PCR). The
host cell is useful for producing a transmembrane segment-free alphal, 3-
fucosyltransferase-fusion protein, by growing the host cell containing a
ceftor operably linked to a polynucleotide encoding a desired polypeptide
or peptide under conditions which allow expression and secretion of the
fusion protein and isolating the fusion protein. The antibody is useful
cor peptide the protein in a sample. The presence of the protein in the
sample is indicative of infection by Helicobacter pylori or the presence
of malignant cells. The antibody is also useful for diagnosing disorders
and monitoring disease, and for inhibiting abnormal alphal, 3-
fucosyltransferase gene product activity. The nucleic acid is useful as
part of ribozyme and/or triple helix sequences and for alphal, 3-
the protein or cell are useful in the development of assays to detect
mammalian tumours. The present sequence represents an H. Pylori alphal, 3-
choosyltransferase encent sequence represents an H. Pylori alphal, 3-
choosyltransferase enchoos by the fuct gene. (Updated on 29-NUG-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Futh, Futh, alpha 1-3/4 fucosyltransferase; glycoprotein; glycolipid;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                        ö
oligosaccharide moieties (i.e. by transfer of a fucose residue to Nacetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, and encrymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 26695 FutA protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate to the glycoprotein. The method is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Producing fucosylated glycoprotein, by contacting recombinant fucosyltransferase protein with mixture comprising donor substrate and acceptor substrate on glycoprotein.

The present invention provides alpha-1,3/4-fucosyltransferase (also termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protein-protein interaction; ulcer; selected interacting domain; SID.

The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This is the amino acid sequence of a selected interacting domain (SID), identified via protein-protein interactions. Note: Where the patent number printed at the top of the pages in the specification has obscured areas of protein sequence, the indexer has replaced the residue with an X to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     complexes of protein-protein interactions in Helicobacter pylori, ful for identifying modulating compounds for treating or preventing

The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This is the
                                                                                                                               The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which modulate the interaction of proteins used for treating or preventing ulcers in a human or animal. This is the amino acid sequence of a selected interacting domain (SID), identified via protein-protein interactions. Note: Where the patent number printed at the top of the pages in the specification has obscured areas of protein sequence, the indexer has replaced the residue with an X to represent an illegible residue
                       New complexes of protein-protein interactions in Helicobacter pylori, useful for identifying modulating compounds for treating or preventing ulcers in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              complexes of protein-protein interactions in Helicobacter pylori, it for identifying modulating compounds for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

(first entry)

amino acid sequence of a selected interacting domain (SID), identified via protein-protein interactions. Note: Where the patent number printed at the top of the pages in the specification has obscured areas of protein sequence, the indexer has replaced the residue with an X to represent an illegible residue 888888

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 5, Application US/09733524A

Patent No. 6534298

GENERAL INFORMATION:
APPLICANT: Taylor, Diane E.

APPLICANT: Taylor, Diane E.

TITLE OF INVENTION: PUCCSYLTRANSFRASES AND EXPRESSION SYSTEMS FOR MAKING AND

TITLE OF INVENTION: EXPRESSING THEM (amended)

TITLE OF INVENTION: EXPRESSING THEM (amended)

TITLE OF INVENTION: BXPRESSING THEM (amended)

TITLE OF INVENTION: BXPRESSING THEM (amended)

TITLE OF INVENTION: BXPRESSING THEM (amended)

FILE REFERENCE: 07254-049002

CURRENT APPLICATION NUMBER: US 09/092,315

PRIOR FILING DATE: 1998-06-05

PRIOR FILING DATE: 1997-06-06

NUMBER OF SEQ ID NOS: 27

SOFTWARE: FRESSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    APPLICANT: Taylor, Diane E.
